

Installation Instructions & User Manual FOR WP Resurrector Elite

Welcome to WP Resurrector Elite, the solution to re indexing your blogs old content..

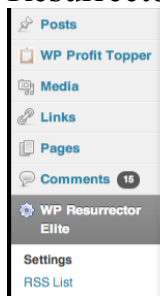

Installation Instructions

Step1

Download the zip from the download's page and install the plugin as you find it. Login to your blogs admin area and install the zip into the plugins directory, Scroll to the plugin directory and activate the plugin.

Step2

From within the Admin section of your site, scroll to the top left hand side to where you see the “Dashboard”. Underneath “Pages” and “Comments” you will see the name of the plugin “WP Resurrector Elite”. Click on the plugin.

Step3

You will be in the “settings” section of the plugin and from here, click on the “TAB” “**Social Bookmark Settings**”.

WP Resurrector Elite Settings

Note: Could not find the above twitter details. Please [Click here](#) to get help.

Fill in your Twitter settings, Twitter Consumer Key, Twitter Consumer Secret, Twitter Access Token, Twitter Access Token Secret.

Compose Tweet can be 100 characters relating to your blogs niche.

If you are stuck with any of the above info, please click on the TWITTER instructions link found at the bottom of the plugins page. This will open up a help section.

Note: Could not find the above twitter details. Please [Click here](#) to get help.

REGISTERING YOUR APPLICATION ON TWITTER

First of all we'll need to register an app for you on Twitter so that you get your API keys you'll use. So for that (getting our app registered on Twitter) [click here](#) or go to <http://twitter.com/apps>. Note that you'll need to login with your Twitter account to register an APP.

After filling the registration form, just click on Save and you'll be redirected to a page where Twitter will give you your API info, in the form of a Consumer Key, Consumer Secret Key, Access Key & Access Secret.

By clicking on the <http://twitter.com/apps> link it will take you to a page where you put in your twitter username and password. Once done so you will be presented with a page that looks like this.

My applications

[Create a new application](#)

Looks like you haven't created any applications yet!

Step 4

Click on the “Create new Application” and fill in the detail required and click save, you will then be presented with your different keys.

soundbar info

Details

Settings

OAuth tool

@Anywhere domains

Reset keys

Delete

Best posts relating to sound bars
<http://www.soundbar-reviews.com>

Organization
Information about the organization or company associated with your application. This information is optional.

Organization	None
Organization website	None

OAuth settings
Your application's OAuth settings. Keep the "Consumer secret" a secret. This key should never be human-readable in your application.

Access level	Read-only About the application permission model
Consumer key	
Consumer secret	
Request token URL	https://api.twitter.com/oauth/request_token
Authorize URL	https://api.twitter.com/oauth/authorize
Access token URL	https://api.twitter.com/oauth/access_token
Callback URL	None

Your access token
It looks like you haven't authorized this application for your own Twitter account yet. For your convenience, we give you the opportunity to create your OAuth access token here, so you can start signing your requests right away. The access token generated will reflect your application's current permission level.

Create my access token

NB – YOU WILL ALSO BE ASKED FOR AN ACCESS TOKEN, PLEASE CLICK ON THE “CREATE ACCESS TOKEN” BUTTON ABOVE.

When all information is filled out your twitter settings should look like this.

Taken from Twitter to show as an example

Be sure to save all changes.

Step 5

Next we need to input our Image Sharing Settings from picasa and flickr.

WP Resurrector Elite Settings

Social Bookmark Settings | **Image Share Settings**

Picasa Settings

Tip: All the fields are mandatory, else auto-image upload will not work.

Email :

Password :

Picasa User ID :

Picasa Album ID :

Note: Could not find the above Picasa details. Please [Click here](#) to get help.

Settings

Tip: All the fields are mandatory, else auto-image upload will not work.

Flickr API Key :

Flickr Secret Key :

Callback URL :

Note: Could not find the above Flickr details. Please [Click here](#) to get help.

In order to fill in your Picasa settings you can click on the “Click Here” link to help you along the way.

Where to find Picasa Settings?

Email/Password is just your Gmail Id (example@gmail.com) and Password. Next, we need the User Id and Album Id. For finding this attribute, first you need to open up that specific Picasa album. After the album appears showing the photos, take a good look over in the right sidebar/panel. You will see the letters RSS. Right-click on the RSS link and copy the link location and paste it in a notepad. And this is what it looks like:

`https://picasaweb.google.com/data/feed/base/user/XXXXXXXXXXXXX
XXXXX/albumid/YYYYYYYYYYYYYYYYYYYYYYY?alt=rss&kind=photo&hl=en_US.`

Here the 'XXXXXXXXXXXXX' denotes the User Id and 'YYYYYYYYYYYYYYYYYYYYYYY' denotes the Album Id. Just copy these attributes and paste it at the respective fields in our Picasa Settings section.

Now you are done with the Picasa Settings and your plugin is ready for auto-image sharing with Picasa!!!

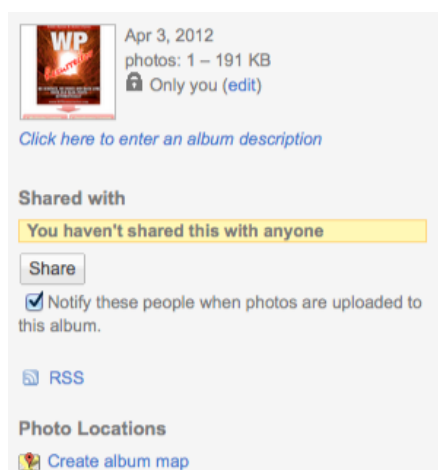

Step 6

Link to Picasa Web

https://accounts.google.com/ServiceLogin?hl=en_US&continue=https%3A%2F%2Fpicasaweb.google.com%2Fhl%2Flogin%3Fcontinue%3Dhttps%253A%252F%252Fpicasaweb.google.com%252Fhome&service=lh2<mpl=gp&passive=true

Just like above, all you have to do is put in your Gmail Username and Password.

Once logged in, you then need to create an album related to your site, In my instance I am naming my album after "SoundBar Pictures". I also need to add one picture to the album. After creating the album, I then click on it and "edit" the visibility to Viewable by WEB. This can be found on the right side of the screen, re the word "EDIT".

Step 7

How to automatically set your blog up to auto post the images from your old posts.

Click on the ALBUM you just created and You will see the letters RSS on the right hand side of the screen. Right-click on the RSS link and **copy the link location** and paste it in a notepad. And this is what it looks like:

https://picasaweb.google.com/data/feed/base/user/XXXXXXXXXXXXXXX/albumid/YYYYYYYYYYYYYYYYYYYYYYY?alt=rss&kind=photo&hl=en_US.

Here the 'XXXXXXXXXXXXXXX' denotes the User Id and 'YYYYYYYYYYYYYYYYYYYYYYY' denotes the Album Id. Just copy these attributes and paste it at the respective fields in our Picasa Settings section.

Now you are done with the Picasa Settings and your plugin is ready for auto-image sharing with Picasa!!!

Step 8

REGISTERING YOUR APPLICATION ON FLICKR

First of all we'll need to register an app for you on Flickr so that you get your API keys you'll use. So for that (getting our app registered on Flickr) go to <http://www.flickr.com/services/apps/create>

Note that you'll need to login with your Flickr account to register an APP.

You can create an application by clicking on the "Request an API Key" link under first point 'Get your API Key'. If you already created an application, you can view your existing applications by clicking on the "Apps by You" link under second point 'Put your app in the Garden'.

After filling the registration form, just click on Submit and you'll be redirected to a page where Flickr will give you your API info, in the form of a Key and Secret. Copy those details and put it in our Flickr Settings section. Beneath those API information in Flickr, there will be a link saying "Edit auth flow for this app". Click on that and you will find a field for 'Callback URL'. Copy the 'Callback URL' available in the plugin settings and paste it here.

Now you are done with the Flickr Settings and your plugin is ready for auto-image sharing with Flickr!!!

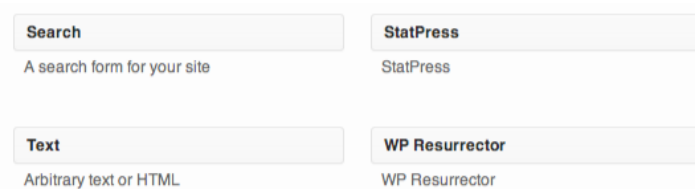

Flickr is straight forward to register for so you should have no problem. It is quick.

Step 9

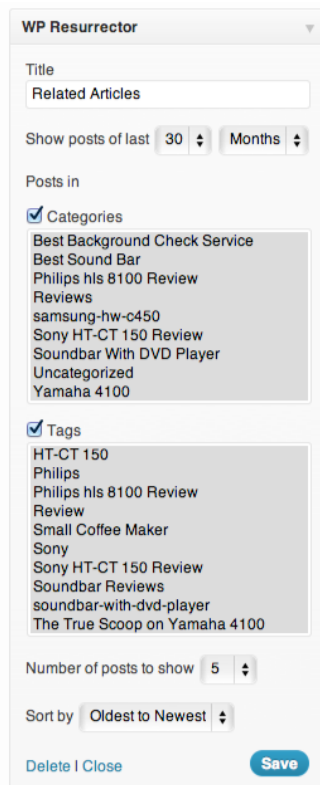

Setting up WP Resurrector widget on your blog

Click on Appearance >> Widgets from your dashboard.

You will see the widget available in "Available widgets"

Drag the WP Resurrector Widget over to the desired sidebar for your site.

The screenshot shows the WP Resurrector widget configuration interface. It has a title field set to 'Related Articles'. The 'Show posts of last' dropdown is set to '30' and the unit is 'Months'. Under 'Posts in', both 'Categories' and 'Tags' are checked. The categories list includes 'Best Background Check Service', 'Best Sound Bar', 'Philips hls 8100 Review', 'Reviews', 'samsung-hw-c450', 'Sony HT-CT 150 Review', 'Soundbar With DVD Player', 'Uncategorized', and 'Yamaha 4100'. The tags list includes 'HT-CT 150', 'Philips', 'Philips hls 8100 Review', 'Review', 'Small Coffee Maker', 'Sony', 'Sony HT-CT 150 Review', 'Soundbar Reviews', 'soundbar-with-dvd-player', and 'The True Scoop on Yamaha 4100'. The 'Number of posts to show' is set to '5' and 'Sort by' is set to 'Oldest to Newest'. At the bottom, there are 'Delete | Close' and 'Save' buttons.

- Give the widget a title.
- This is where the magic happens and as you can see I have selected that I would like posts to be displayed that are as old as 30 months. From here the plugin will post links within the widget beginning 30 months back and work forward within time.
- You can see that I have ticked posts to show from all categories and all tags. This is done by pressing the cmd or ctrl buttons on your computers and at the same time clicking on the category headings.
- It is recommended not to saturate the widget with links, so to be safe select 5 and sort by oldest to newest.

- Click save.

Step 10

Well done, you have now started the process of re indexing your sites old posts. View the widget on your site and relax.

Yours
KME Byrne
