# Installation

## WordPress Installation

You must first install the Ken Sar Access Control System (KSACS) plugin. This plugin controls the licensing aspects of your new software.

The KSACS is extremely easy to install and setup. The plugin is installed like any other standard WordPress plugin.

1. Unzip contents of the download file to your local hard drive.
2. If it isn't already installed for another product, you must install the KSACS licensing plugin.
  - Use the Add New WordPress feature (Plugins | Add new) to upload the plugin file: `ks_access_control.zip`.
3. Activate both Plugins

## Licensing Key Generation

If you have not installed the KSACS plugin, you'll see the screen below when you attempt to access screens from your purchased plugin. (Make sure you've activated that plugin.)

**Incomplete Installation**

---

You are missing files that are integral to the proper operation of this software.

Usually, this is because Ken Sar's Access Control System plugin is outdated (must be Version **1.02.92** or higher) or has not been installed and activated. Please check your installation instructions and ensure you have completed the installation properly.

Go back and install/activate the KSACS plugin as discussed above.

You must generate a valid license key in order to configure and use your purchased plugin.

When you attempt to access a screen from your purchased plugin, you should be taken to this screen:

**Request New License**

---

**Account Email:**

Retrieve License from Account Email \*

\* - If you have already licensed this product on this server and are re-installing, but do not know or did not save your key code, you can retrieve your existing license key with only your Account Email address.

1. Enter your email address. It should be the same email address you used to purchase the product.
2. Click "Request Activation Key".

If the system has your personal details (primarily email address) you should see the License Ok screen:

**Your license has not yet been activated.**  
Please enter the Activation Key (sent to your Account Email address)  
in the "Enter Activation Key" field below.

---

<b>Product License</b>	<b>Status = PENDING</b>
------------------------	-------------------------

---

**Account Email:** EssBd827fd6830f4a0238acae2f  
**Key Code:** EssBd827fd6830f4a0238acae2ff902111690  
**Product:** wpCyteClone - Developer (WPCyteCloneDev)

**Server - Host Name:** imtrainingworkshopa2.info  
**Server - IP Address:** 174.120.139.2

**Type:** Temporary Key  
**Start Date:** 31/Mar/2011 05:50:27  
**Expiration Date:** 02/Apr/2011 05:50:27

**Enter Activation Key:**

If not, the system will display a screen that requests your user information.

### Setup New Account

**\*Account Email:**

**\*Key Code:**

**First Name:**

**Last Name:**

**Address 1:**

**Address 2:**

**Address 3:**

**City:**

**County:**

**State/Province:**

**Zip/Post Code:**

**\*Country:**

**Company:**

Enter your user information and click the "Register New User" button.

If this is a Developer Version, you'll get a second screen to enter your client's information. It looks like the "Setup New Account" screen but adds three (3) additional fields:

Setup New Account	
* <b>Account Email:</b>	<input type="text" value="fake-address@itsnogood.com"/>
* <b>Key Code:</b>	<input type="text" value="D70el0p01176pE6Q2/QGT7vzxdaCddajmdaj7P"/>
* <b>New Account Email:</b>	<input type="text"/>
* <b>New Account Password:</b>	<input type="password"/>
* <b>Confirm Password:</b>	<input type="password"/>
<b>First Name:</b>	<input type="text"/>

1. **New Account Email** – Enter your client's email address. If you're building a site for yourself or you're building the site on "spec" (and don't have a client yet), you should enter your own email address again. In the example above, you'd enter [fake-address@itsnogood.com](mailto:fake-address@itsnogood.com) in this field. The licensing software will let you "convert" the license to an End User license at a later date.
2. **New Account Password** – this is actually for future functionality, where you'll be able to maintain your license on the host site.
3. **Confirm Password** – to ensure you've entered your password as expected.

Press the "Register New Dev Client" button and the system should return a valid license key and display the OK screen.

### ***Activation Email***

The secret to the Ken Sar Access Control System is the Activation Email. Each time your software is installed on a new domain, you'll have to generate a license key. When that key is generated, it's created as a temporary key that expires in two (2) days (48 hours).

The system will send you a email to confirm that the software is being installed on a domain under your control. That email contains a activation key that must be used to convert the temporary license into a permanent license.

If you have not received the activation email within minutes, you may want to check your SPAM folder and/or whitelist the address "[noreply-license@imcheckout.com](mailto:noreply-license@imcheckout.com)".

You can resend the activation email at any time from the License Management screen under the WordPress "Tools" menu.
