

Easy Installation Guide

Installing Easy Deal Builder is quick and easy – Just follow these simple steps (or watch the install video if your prefer at <http://easydealbuilder.com/help>).

Step 1.

Unzip the “edb.zip” file and you will have a folder called “**admin**”

Step 2.

Load up your favourite FTP program (we recommend Filezilla) and connect to your webhost. In the ROOT of your domain you will need to create a folder for EDB to reside in. Create and name the folder (we suggest “**deals**” as a suitable name) then move on to step3.

Step 3.

Using your FTP software, upload (drag and drop or right-click and select upload) the entire “**admin**” folder and its contents to the “**deals**” folder you created in step 2.

Step 4.

Open your web-browser (we recommend the latest version of FireFox) and navigate to the following web address : <http://yourdomain.com/deals/admin/install.php>

*(replace **yourdomain.com** with the domain you have uploaded it to)*

Step 5.

When the install.php page has loaded in your web browser, choose a username and password and fill in the information on screen – Then enter your email address (this email address is used to send you a new password if you forget yours). When you have finished press the “**Continue**” button

Step 6.

You are finished! You can now log in to EDB at the following web address:

<http://yourdomain.com/deals/admin/dologin.php>

*(replace **yourdomain.com** with the domain you have uploaded and installed to)*

We have step by step videos showing both installation and full use of EDB at the following link : <http://easydealbuilder.com/help>
